**RFP-RDOS-26-WATER SERVICES-084**

The Regional District of Okanagan-Similkameen (RDOS) is seeking proposals from qualified Proponents to complete an investigation and condition assessment of a major raw water main. The pipeline to be investigated is approximately 2100-meter length of 600mm diameter PVC (AWWA C905 PR165 DR25) or ductile iron (AWWA C151/A21.51 PC 200) c/w cement mortar lined (AWWA C104/A21.4) & polyethylene encased (AWWA C105/A21.5) spanning from the Okanagan Lake water intake to the McKay Water Treatment Plant. The raw watermain is the main feeder from the lake source to the water treatment plant. The successful proponent will need to conduct a condition assessment to identify any forming issues and gauge a potential timeline for rehabilitation before a catastrophic break occurs. This will enable the RDOS to identify areas of the pipeline where the risk of failure is unacceptably high, anticipate the remedial cost and establish a remediation plan.
