Climate Action

In the RDOS, all electoral areas and member municipalities participate in climate action.

Current Climate Action Initiatives in the RDOS:

Electric Vehicle Roadshow

Over the coming months, the RDOS will be hosting electric vehicle (EV) information booths at various community events in an effort to engage residents on the benefits of electric vehicles and the future of EVs and charging stations in the region.

Residents are invited to visit the RDOS electric vehicle information booths to speak with staff and industry experts about how EVs work, the pros and cons of EVs, and the role EVs can play in strengthening communities. The booths will feature prizes and games for the whole family and a competition to design a decal for the new RDOS Parks electric van.

Home Energy Efficiency

The RDOS has partnered with Properate, a platform that provides customized information on best practices for home upgrades. The free platform shows rebates, grants, and other incentives available for those looking to make home energy-efficient upgrades. By using Properate, residents of the RDOS can quickly identify potential areas for improvement in their homes and access financial support.

Did you know?

Earlier this year, the RDOS released a series of educational videos on home energy efficiency featuring local community members. The videos can be found on the RDOS YouTube channel.
