REQUEST FOR PROPOSALS

OKANAGAN FALLS SEWER SYSTEM – CEDAR STREET GENERATOR REPLACEMENT

1. INTRODUCTION

1.1. PURPOSE

The Regional District of Okanagan-Similkameen (RDOS) is seeking quotations from qualified professionals to provide electrical design and contracting services to install a new pad mounted generator at the Cedar Street Lift Station, located at 1440 Cedar Street in Okanagan Falls, B.C.

The Contractor will be responsible for determining the specifications for the new generator, preparing any design drawings, aiding the RDOS in developing a Request for Quotes (RFQ) document to procure the new generator, and completing all of the required work to install and fully commission the new generator. The scope of work completed by the Contractor will include, but not be limited to the following: installing an automatic transfer switch, running conduit and wires, pouring a new pad to mount the generator, completing all required wiring and terminations to complete the installation, and working with the generator supplier and the RDOS to test and commission the new equipment.

1.2. BACKGROUND

The Cedar Street Lift Station was the location of the original Okanagan Falls Waste Water Treatment Plant. After the construction of the new Treatment Plant in 2014, Cedar Street was converted to a lift station. The lift station currently houses a large backup generator, which was sized for the original treatment plant. The existing generator was installed in the 1970s and has long outlived its useful life. The demolition/removal of the existing generator is not part of the scope of work for this project.

The Regional District completed some electrical work in 2018 to make it possible to hook up a mobile generator in case the existing generator fails. This electrical work is shown on the single line diagram, which can be accessed via the background documents link.

1.3. SUPPORTING DOCUMENTATION

To aid contractors in developing their quotes, the RDOS has compiled background documents from site including some as built documentation and pictures available on the RDOS OwnCloud site:

Environmental Performance Decision Criteria

Basic evaluation criteria for rationalizing the purchase of environmentally sound alternatives:

- (i) Does the alternative product meet or exceed the minimum required performance specifications? (e.g) durability, safety, structural integrity. (If no, use the conventional product; if yes move to (ii)).
- (ii) Is the unit pricing of the alternative product equal, or less than, the conventional product? (If yes purchase the alternate product; if no move to (iii)).
- (iii) What is the total annual cost differential of using the alternate product instead of the conventional? (If the effect on budget is nominal use the alternate product; if the effect on budget is more than nominal go to (iv)).
- (iv) By using the alternate product are there any offsetting benefits that can be clearly measured and recorded in cost avoidance accruing to the same Business Unit, or to other business Units and, if so, do those benefits equal or exceed the extra acquisition costs? (If yes purchase the alternate product; if no go to (v)).
- (v) Are there any other benefits that are not measurable in any direct monetary sense but are benefits that we ought to realize for other on-pecuniary reasons?, e.g. “green benefits” such as reduced pollution, air emissions, effluent release, recyclable & disposal issues etc. (If no, purchase the conventional product; if yes define those reasons and report them through established reporting channels to get the increased budget commitment approved. In either case go to (vi)).
- (vi) If acquisition of the alternative product at the higher cost is approved purchase the alternate product; if not purchase the conventional product.
