Environmental Performance Decision Criteria

Basic evaluation criteria for rationalizing the purchase of environmentally sound alternatives:

- (i) Does the alternative product meet or exceed the minimum required performance specifications? (e.g) durability, safety, structural integrity. (If no, use the conventional product; if yes move to (ii)).
- (ii) Is the unit pricing of the alternative product equal, or less than, the conventional product? (If yes purchase the alternate product; if no move to (iii)).
- (iii) What is the total annual cost differential of using the alternate product instead of the conventional? (If the effect on budget is nominal use the alternate product; if the effect on budget is more than nominal go to (iv)).
- (iv) By using the alternate product are there any offsetting benefits that can be clearly measured and recorded in cost avoidance accruing to the same Business Unit, or to other business Units and, if so, do those benefits equal or exceed the extra acquisition costs? (If yes purchase the alternate product; if no go to (v)).
- (v) Are there any other benefits that are not measurable in any direct monetary sense but are benefits that we ought to realize for other on-pecuniary reasons?, e.g. “green benefits” such as reduced pollution, air emissions, effluent release, recyclable & disposal issues etc. (If no, purchase the conventional product; if yes define those reasons and report them through established reporting channels to get the increased budget commitment approved. In either case go to (vi)).
- (vi) If acquisition of the alternative product at the higher cost is approved purchase the alternate product; if not purchase the conventional product.
