REQUEST FOR PROPOSALS
FAULDER WATER SYSTEM CAPITAL PLAN

1. INTRODUCTION

1.1. PURPOSE

The Regional District of Okanagan Similkameen is requesting submission of Proposals from qualified Proponents to complete an assessment and upgrade plan for the Faulder Water System infrastructure with a focus on asset management and meeting future climate conditions and water demands.

The finished project report will give the Regional District a clear understanding and direction for the upgrades and requirements necessary for the Faulder Water System into the future.

1.2. BACKGROUND

The Regional District of Okanagan-Similkameen owns and operates the Faulder water system to supply domestic water to 81 connections with an estimated population of 215 residents. The system is sourced by a single well installed adjacent to Trout Creek at the confluence of Darke Creek in the Meadow Valley aquifer. There is a long history of both supply and quality concerns for the residents that rely on the Faulder system. Water quality concerns were addressed in 2015 with the installation of a package uranium treatment system.

Components of the project must include a review of the existing infrastructure in terms of capacity and service life remaining, recommendations for upgrades needed to maintain current service connections, a maintenance schedule to include end of service cycle for existing infrastructure, cost of replacement and upgrading of current configuration.

A thorough assessment of existing infrastructure in terms of capacity and life left, cost of improvements overall and incremental improvements/upgrades, identify deficiencies and cost to address, determine vulnerabilities within existing infrastructure and necessary mitigation.

Climate risk assessments are a crucial component to guide, design and operate infrastructure and systems that are resilient to the effects of extreme weather and our changing climate. Climate risk assessment is a process of identifying how assets respond to and recover from the effects of a variety of hazards attributed to climate impacts. Many governments and organizations are using or requiring climate risk assessment to inform adaptation action.

Provide recommendations for future upgrades to the system to meet changing climate needs. Supply limitations that were identified in the most recent Meadow Valley Aquifer Study supports the maintenance of the current level of service. - (iv) By using the alternate product are there any offsetting benefits that can be clearly measured and recorded in cost avoidance accruing to the same Business Unit, or to other business Units and, if so, do those benefits equal or exceed the extra acquisition costs? (If yes purchase the alternate product; if no go to (v)).
- (v) Are there any other benefits that are not measurable in any direct monetary sense but are benefits that we ought to realize for other on-pecuniary reasons?, e.g. “green benefits” such as reduced pollution, air emissions, effluent release, recyclable & disposal issues etc. (If no, purchase the conventional product; if yes define those reasons and report them through established reporting channels to get the increased budget commitment approved. In either case go to (vi).
- (vi) If acquisition of the alternative product at the higher cost is approved purchase the alternate product; if not purchase the conventional product.
