

# Provincial Floodplain Map

Schedule '3' – Electoral Area "G"  
Zoning Bylaw No. 2781, 2017

This is Schedule '3' (Provincial Flood Plain Map) as referenced in the Regional District of Okanagan-Similkameen's Electoral Area "G" Zoning Bylaw No. 2781, 2017.

Chair \_\_\_\_\_ Chief Administrative Officer \_\_\_\_\_

NOTE: PONDING MAY OCCUR BEHIND EXISTING DYKES DURING HIGH FLOW PERIODS RESULTING IN THE FLOOD LEVELS SHOWN TO BE EXCEEDED IN THIS AREA.

- Use and Limitations of Floodplain Maps**
- Users must note the dates of base mapping, aerial photography, river surveys and issue of mapping relevant to dates of development in the map area. Subsequent developments or changes within the floodplain or channel (natural or constructed) will affect flood levels and render site-specific map information obsolete.
  - Floodplain maps are administrative tools which depict minimum flood elevations and floodplain boundaries. Flooding may occur outside of the designated floodplain boundary.
  - Floodplain maps do not provide information on site-specific flood hazards such as, land erosion or high water velocity, sudden shifts in the channel of the watercourse, or alluvial and debris flow fan areas.
  - Other sources of water, roads, railways or other barriers can restrict water flow and affect local flood levels. As well, obstructions such as ice and debris, flooding in surrounding areas, channel deposits, groundwater or other phenomena can cause flood levels to exceed those indicated on the map. Land adjacent to a floodplain may be subject to flooding from tributary watercourses.
  - Floodplain maps do not indicate or locate legal survey boundaries. A site survey is required to reconcile property location, ground elevations, and designated flood level information.
  - The accuracy of the location of a floodplain boundary as shown on this map is limited by the base topography. It is generally assumed to be plus or minus one-half the increment of the ground contours.
  - Professional assistance and detailed engineering analysis are required to address any of the above considerations.

NOTE: CONDITIONS EXCEEDING DYKE DESIGN PARAMETERS COULD RESULT IN DYKE BREACH CAUSING INUNDATION, EROSION AND DEPOSITION WITHIN THE DYKED AREA. FLOOD LEVEL ISOGRAMS ARE SHOWN DASHED BEHIND STANDARD DYKES.

NOTE: CONDITIONS EXCEEDING DYKE DESIGN PARAMETERS COULD RESULT IN DYKE BREACH CAUSING INUNDATION, EROSION AND DEPOSITION WITHIN THE DYKED AREA. FLOOD LEVEL ISOGRAMS ARE SHOWN DASHED BEHIND DYKES.

NOTE: PROBLEMS RELATED TO ICE SUCH AS DAMAGE TO BANK PROTECTION WORKS, BRIDGES AND NEARBY BUILDINGS HAVE BEEN RECORDED IN MANY AREAS OF THE SIMILKAMEEN RIVER VALLEY.
