SEE SHEET 12

SEE SHEET 10

- Use and Limitations of Floodplain Maps**
- Users must note the dates of base mapping, aerial photography, river surveys and issue of mapping relevant to dates of development in the map area. Subsequent developments or changes within the floodplain or channel (natural or constructed) will affect flood levels and render site-specific map information obsolete.
 - Floodplain maps are administrative tools which depict minimum flood elevations and floodplain boundaries. Flooding may occur outside of the designated floodplain boundary.
 - Floodplain maps do not provide information on site-specific flood hazards such as, land erosion or high water velocity, sudden shifts in the channel of the watercourse, or alluvial and debris flow fan areas.
 - Other sources of water, roads, railways or other barriers can restrict water flow and affect local flood levels. As well, obstructions such as ice and debris, flooding in surrounding areas, channel deposition, groundwater or other phenomena can cause flood levels to exceed those indicated on the map. Land adjacent to a floodplain may be subject to flooding from tributary watercourses.
 - Floodplain maps do not indicate or locate legal survey boundaries. A site survey is required to reconcile property location, ground elevations, and designated flood level information.
 - The accuracy of the location of a floodplain boundary as shown on this map is limited by the base topography. It is generally assumed to be plus or minus one-half the increment of the ground contours.
 - Professional assistance and detailed engineering analysis are required to address any of the above considerations.

NOTE:
The floodplain limits as shown are within the accuracy of the base mapping. Site specific ground elevations should be confirmed by field survey.

Use and Limitations of Floodplain Maps

- Users must note the dates of base mapping, aerial photography, river surveys and issue of mapping relevant to dates of development in the map area. Subsequent developments or changes within the floodplain or channel (natural or constructed) will affect flood levels and render site-specific map information obsolete.
- Floodplain maps are administrative tools which depict minimum flood elevations and floodplain boundaries. Flooding may occur outside of the designated floodplain boundary.
- Floodplain maps do not provide information on site-specific flood hazards such as, land erosion or high water velocity, sudden shifts in the channel of the watercourse, or alluvial and debris flow fan areas.
- Other sources of water, roads, railways or other barriers can restrict water flow and affect local flood levels. As well, obstructions such as ice and debris, flooding in surrounding areas, channel deposition, groundwater or other phenomena can cause flood levels to exceed those indicated on the map. Land adjacent to a floodplain may be subject to flooding from tributary watercourses.
- Floodplain maps do not indicate or locate legal survey boundaries. A site survey is required to reconcile property location, ground elevations, and designated flood level information.
- The accuracy of the location of a floodplain boundary as shown on this map is limited by the base topography; it is generally assumed to be plus or minus one-half the increment of the ground contours.
- Professional assistance and detailed engineering analysis are required to address any of the above considerations.

NOTE:
Wave action and related erosion at high lake levels may present a special flood hazard depending on site specific conditions.

SKAHA LAKE FLOOD LEVEL
339.2 meters
(G.S.C. Datum)

SHUTTLEWORTH CREEK ALLUVIAL FAN
The fan area may be subject to special flood hazards due to channel avulsion and erosion caused by channel accretion and/or debris jamming.
Floodplain limits not determined.

NOTE:
The floodplain limits as shown are within the accuracy of the base mapping. Site specific ground elevations should be confirmed by field survey.

NOTE:
Floodplain limits based on upstream flood level at vertical drop structure (VDS). Dashed flood level box downstream of VDS for information purposes.

Surveys: River survey done by Survey Section, Water Management Branch, Project 75-DBMP-2, 1979 and 1987.
Cadastral: Reference Map Series 1:25 000, Surveyor General Branch, 1992.
Mapping: River mapping done by Map Production Unit, Survey Section, Water Management Branch, 1992.

Epic origin referred to U.T.M., Projection Zone 10.

1. The floodplain areas as depicted on this map have been delineated pursuant to the Canada/British Columbia Floodplain Mapping Agreement (1988) by the Minister of the Environment for Canada and the Minister of Environment, Lands and Parks for British Columbia. Flooding may still occur outside of the delineated floodplain areas. The Ministers do not assume any liability by reason of the letter in designation or failure to enter in designate areas on this map.
2. The designated flood has a statistical frequency of occurrence of once every 200 years.
3. The flood levels were computed using a standard step method modelling technique, assuming open water flow conditions.
4. The floodplain limits assume the absence of all dykes.
5. The floodplain limits and flood levels include an allowance for freeboards.
6. The floodplain limits are not established on the ground by legal survey.
7. The floodplain limits are not delineated for side streams and tributaries.
8. The required setbacks of buildings from the natural boundaries of rivers and watercourses to allow for the passage of floodwaters and possible bank erosion is not shown. This information is available either through local municipalities of the Ministry of Environment, Lands and Parks.
9. MAPS AVAILABLE FROM MAPS B.C., MAP AND AIR PHOTO SALES, VICTORIA, B.C.

Use and Limitation of Elevation Data

- Elevation data was derived from a variety of sources and some elevation information may not be accurate. The data was derived from a variety of sources within the floodplain or adjacent areas of the floodplain and does not represent a uniform elevation across the floodplain.
